

Installing Cresta Sales Module

Follow these steps to install and configure a cresta sales module in your Odoo instance.

1. Prepare Your Environment

Before installing the module, ensure you have the following prerequisites: - A running Odoo instance. - Access to the Odoo server or a development environment. - Basic understanding of Odoo's file structure.

2. Copy the Module

1. Locate the module folder, typically `cresta_sales`.
 2. Copy the module folder to the Odoo `addons` directory. This directory is usually located at:
 - **Linux:** `/opt/odoo/addons` (default installation)
 - **Windows:** `C:\Program Files (x86)\Odoo 17\server\addons`
 - **Custom Path:** As defined in your `odoo.conf` file under the `addons_path`.
-

3. Update Module List

1. Restart the Odoo server to ensure it recognizes the new module.
 - **Command:**
`sudo service odoo restart`
Or, if running Odoo manually:
`./odoo-bin -c /etc/odoo/odoo.conf`
 2. Log in to your Odoo instance as an admin.
 3. Go to **Apps** (from the main menu).
 4. Click the **Update Apps List** option from the **Apps** menu (top-right corner).
-

4. Install the Module

1. Search for the module by its name ("`cresta_sales`") in the Apps menu.
2. If the module is not visible:
 - Ensure the **"Apps" filter** is cleared or set to **"All"**.
 - Verify the module folder is in the correct `addons` path.
 - Check for syntax errors in the module by reviewing server logs.

3. Once found, click the **Install** button.
-

5. Troubleshooting Installation Errors

- **Missing Dependencies:**
Install any dependent modules listed in the error message.
- **Python Libraries:**
If a required library is missing, install it using pip: “`bash pip install`
